ABOUT ME

Backend Engineer with 3+ years of experience building scalable APIs, distributed systems, and backend services. Strong in Python, Go, PostgreSQL, and Redis, with hands-on experience in designing reliable data flows, optimizing performance, and debugging production systems. Experienced with AWS and Azure, focused on building high-performance and maintainable systems.

EXPERIENCE

Integration Engineer

Mar 2026 – Present

Turbohire

Hyderabad, IN

C#, JavaScript, Azure

- Worked on integrating TurboHire with external HRMS systems, enabling sync across hiring workflows.
- Configured and debugged no-code integration workflows, handling data mapping and API-level issues during client onboarding.

Software Development Engineer II

Jan 2025 – Oct 2025

WebCue

Mohali, IN

Golang, Python, FastAPI, PostgreSQL, ClickHouse, MongoDB, AWS

- Architected backend services for analytics platform processing 10K+ daily events, leveraging ClickHouse for high-performance OLAP queries and optimized indexing.
- Led development of event ingestion and analytics pipelines ensuring reliable data flow, consistency, and scalable API design.
- Designed and deployed cloud-native infrastructure on AWS (EC2, Lambda, S3, Kubernetes), improving observability and production stability.
- Optimized PostgreSQL queries and schema design to reduce latency and improve performance under load.

Backend Developer

Nov 2023 – Dec 2024

Prishni

Remote

Python, Django, FastAPI, PostgreSQL, Redis, Docker, AWS, Azure

- Refactored Django and FastAPI services improving API response time by 3x and reducing database load by 40%.
- Designed and maintained distributed async task processing system using Redis + Celery, handling peak loads of 50K background jobs/day with retry safety and failure handling.
- Built backend architecture for Analytics Dashboard implementing secure role-based access control for multi-user data access.
- Containerized services using Docker and implemented CI/CD pipelines across AWS and Azure environments.

App Development Lead

Jan 2023 – Oct 2023

Undigitally

Remote

Python, FastAPI, AWS, Firebase

- Designed FastAPI backend powering mobile application used by 5K+ users with optimized latency and efficient query handling.
- Developed real-time chat and offline-first backend services with secure authentication and scalable API endpoints.
- Deployed backend infrastructure on AWS and Firebase with structured logging and monitoring support.
- Led backend feature delivery and coordinated API design with frontend and mobile teams.

PROJECTS

TraceLens

Python, FastAPI, Redis, LLM APIs

- Built a system to analyze application logs and traces to identify anomalies and potential root causes.
- Used LLM-based reasoning to correlate events and highlight failure patterns across services.
- Designed pipelines to process and summarize large volumes of logs for faster debugging.

Pulse – Durable Job Processing System

Golang, PostgreSQL, Worker Pools, Concurrency

- Built high-performance job processing system in Go with in-memory dispatch and PostgreSQL-backed durability, implementing at-least-once execution semantics.
- Designed worker pool with configurable concurrency, exponential retry backoff, crash recovery, and graceful shutdown to ensure reliable background task execution.

SKILLS

Languages: Python, Go, SQL, JavaScript

Backend: FastAPI, Django, Gin, REST APIs

Databases: PostgreSQL, Redis, MongoDB, ClickHouse

Systems: Distributed Systems, Concurrency, Async Processing

Cloud: AWS, Azure, Docker, Kubernetes, CI/CD
